ZATIARAS JUICE

Business Requirements Document

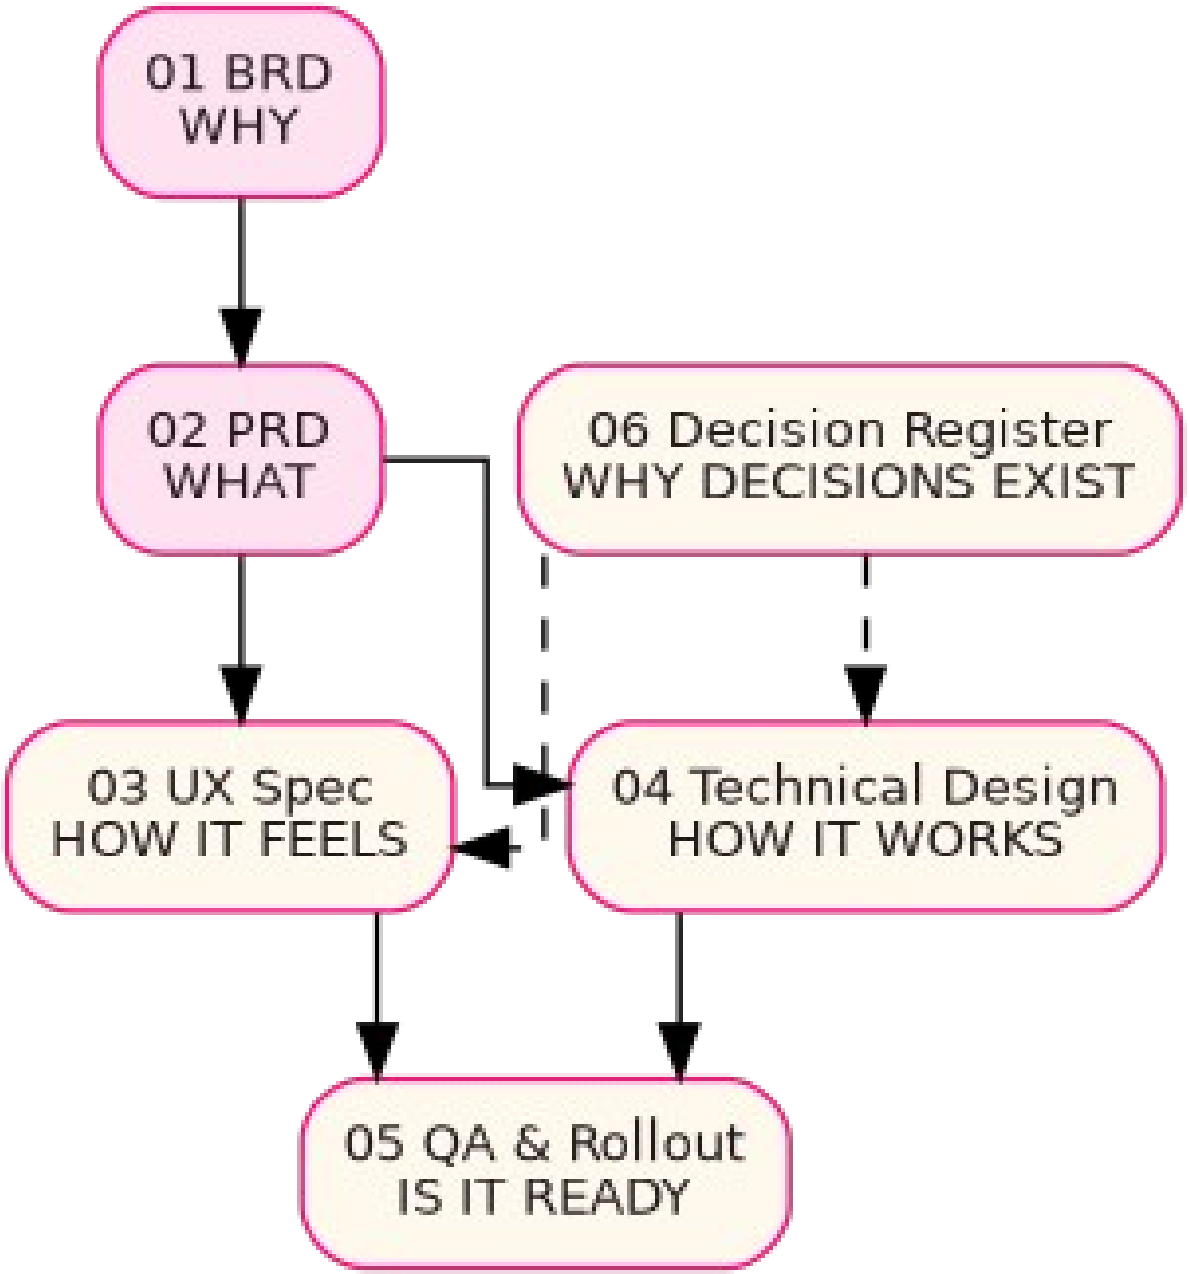

Zatiaras Web V1 - Business rationale, outcomes, scope and governance

Document code	ZJW-BRD-001
Version	1.1
Status	Reconciled Baseline
Planning cut-off	15 September 2026
Agent companion	docs/PRODUCT.md
Normative basis	Reconciled domain-specific source hierarchy; 3 official brand PDFs govern visual identity; legacy digital BRD excluded

Purpose

This document is part of the reconciled Zatiaras Web V1 source-of-truth set for human review and controlled handoff to AI coding agents. It is synchronized with a repo-native companion file and the official brand PDF authority set. The legacy digital BRD is not normative.

Document set, source authority and companion mapping

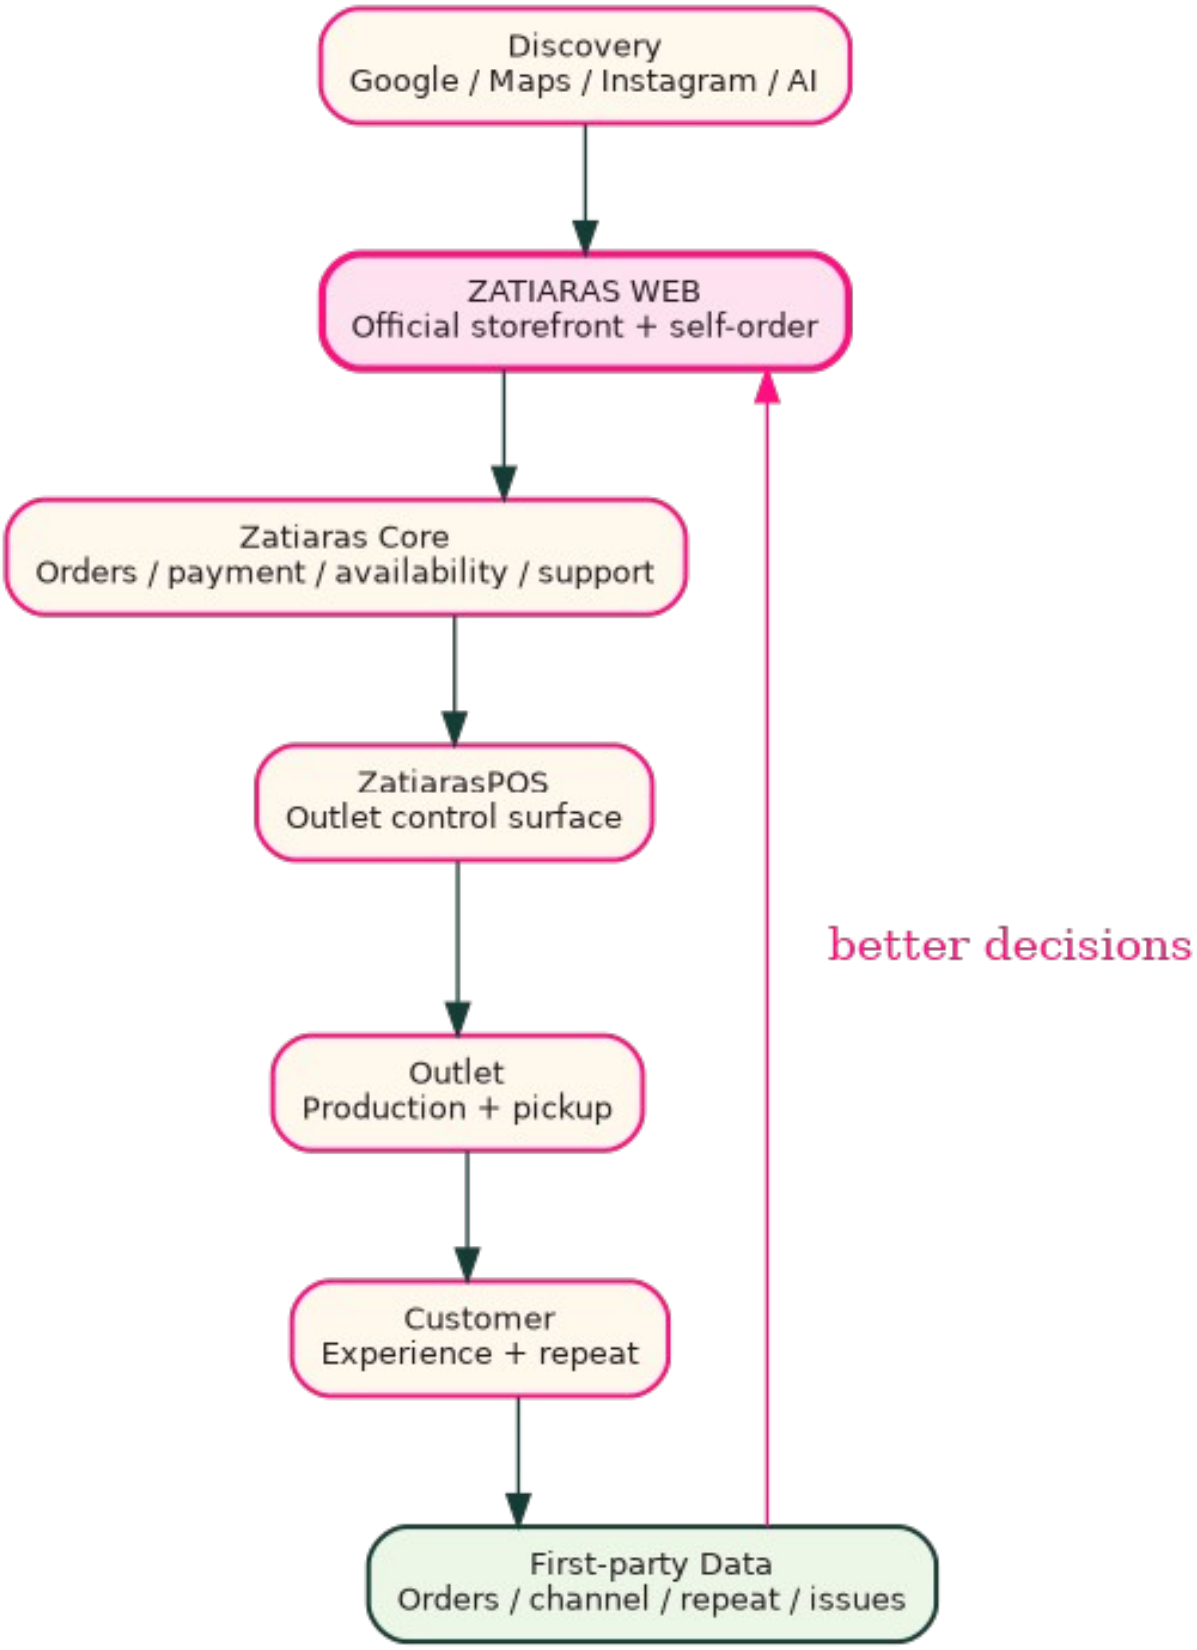

Human specification	Repo-native companion	Primary authority
01 BRD	docs/PRODUCT.md	Business intent, outcomes, scope
02 PRD	docs/SPEC_V1.md	Product behavior and business rules
03 UX Specification	docs/UX.md	Interaction and user journeys
04 Technical Design	docs/ARCHITECTURE.md + docs/CONTRACTS.md	Architecture, boundaries and contracts
05 QA / Rollout	docs/QUALITY.md	Definition of correct and launch gates
06 Decision Register	AGENTS.md + referenced decision IDs	Decision rationale and revisit triggers
3 official Brand PDFs	docs/BRAND_REFERENCES.md	Visual identity and application authority

Current document mapping
01 Business Requirements Document (BRD) is paired with docs/PRODUCT.md. If prose conflicts with the official brand PDFs on visual identity, the brand PDFs win for that domain. If implementation conflicts with approved requirements, the conflict must be surfaced rather than guessed.

1. Executive summary

Zatiaras Web V1 is proposed as an owned digital commerce and discovery layer for Zatiaras Juice in Samarinda. Its role is to connect discovery, product understanding, self-order pickup, digital payment, outlet fulfillment, human support, first-party data and repeat behavior in one controlled customer journey. It is not a replacement for walk-in sales, WhatsApp or marketplace delivery channels.

Business decision
Build the website as growth infrastructure, not as a brochure. The web must increase profitable, repeatable orders while preserving outlet simplicity and customer trust.

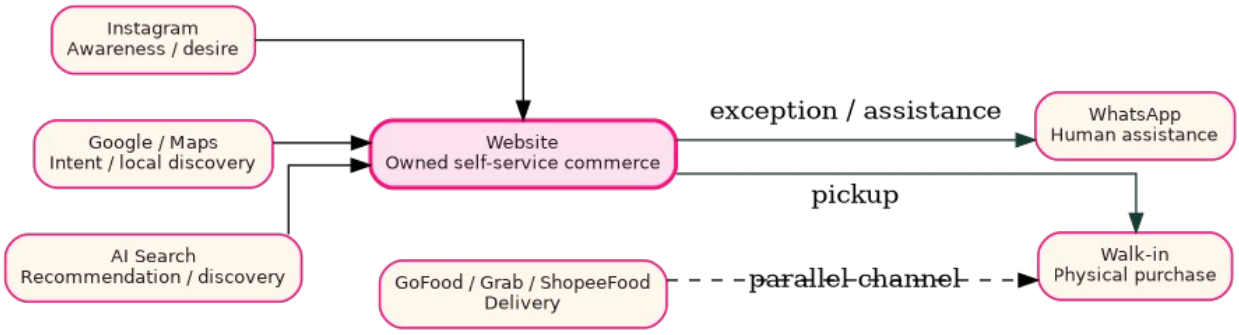

2. Business context and why now

Samarinda remains an attractive but crowded F&B market. Official city sources report a population of about 893,385 and 2025 economic growth of about 6.22%, while the city maintains an updated UMKM dataset by district and business type. This supports a strategy based on capturing existing demand more efficiently rather than assuming an empty market. [EXT-8][EXT-9]

The Zatiaras business already has two active Samarinda outlets in the current pilot scope: Juanda and Slamet Riyadi. Existing digital demand is fragmented across Google/Maps, Instagram, WhatsApp, walk-in purchasing and delivery marketplaces. The opportunity is to create an owned layer that improves discovery and conversion without forcing every customer into one channel.

Pilot outlet	Current planning status	Current planning hours
Juanda	Active; included in web pilot	Mon-Sun 07:00-23:00
Slamet Riyadi	Active; included in web pilot	Mon-Sat 07:00-22:00; Sunday closed

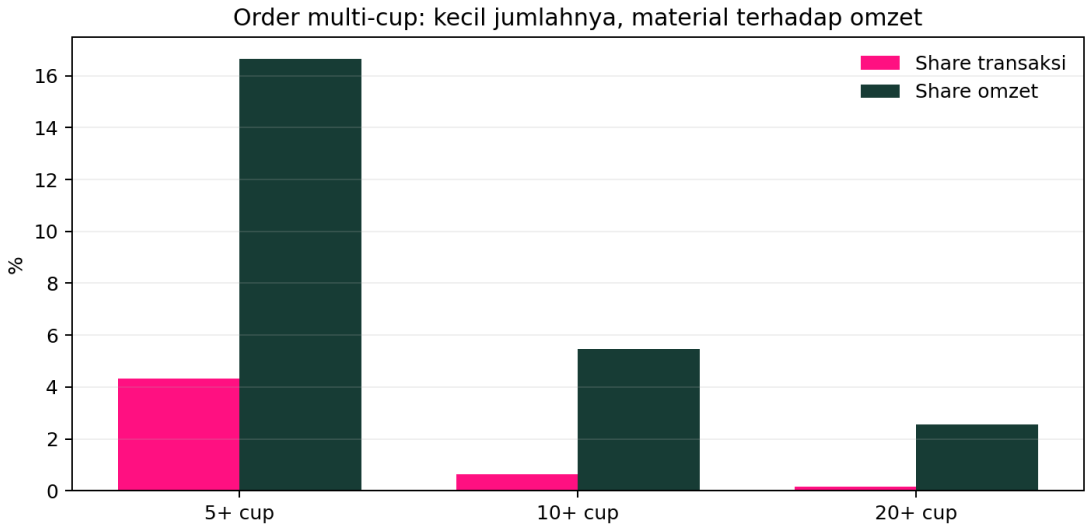

Street address and map pin must come from the current managed Google Business Profile / approved operational record. Do not infer or invent address data.

3. Internal evidence baseline

The following figures are historical, not a September 2026 live forecast. They are useful for sizing the opportunity and for defining measurement requirements. The Samarinda POS export aggregates city activity and does not reliably separate Juanda from Slamet Riyadi. [INT-3]

Historical measure	Observed value	Interpretation
Recent window	7 Apr-26 Jun 2026: Rp165.44M revenue across 4,234 sales rows	Approx. 52.9 sales per active day; AOV approx. Rp39.1k
Full export	26 Nov 2025-26 Jun 2026: Rp397.07M across 9,996 sales rows	Useful for basket and group-order pattern analysis
5+ cup orders	433 transactions; 4.33% of transactions but 16.65% of revenue	Group/multi-cup orders are commercially material
10+ cup orders	64 transactions; 0.64% of transactions but 5.47% of revenue	Supports a controlled group-order lane
Data caveat	Customer-name field is noisy and channel attribution is incomplete	Do not label all large baskets as office orders without further validation

4. Business problems to solve

ID	Business problem	Business consequence
BP-01	No single owned digital source of truth for menu, outlet, product proof and direct ordering	Discovery and conversion are fragmented across channels
BP-02	Pickup ordering remains dependent on walk-in/assisted behavior	Friction and manual work remain high for repeat customers
BP-03	Marketplace, walk-in and owned-channel demand are not unified operationally	Exact real-time inventory cannot be trusted across all channels
BP-04	Repeat behavior and direct-channel economics are not measured cleanly	Owner cannot optimize acquisition vs repeat with confidence
BP-05	Paid-order exceptions need a clear recovery path	Money-related uncertainty can damage trust quickly
BP-06	Zatiaras has weaker web/AI entity signals than some Samarinda competitors	AI and search recommendations may overlook the brand
BP-07	Outlet staff have relatively low digital proficiency	Complex operational software would create adoption and error risk

5. Business opportunity and desired operating model

- Owned pickup commerce: customer can choose, pay and pick up without mandatory account creation.
- Human-assisted recovery: routine transactions are automated; payment/refund exceptions hand off to a human through WhatsApp.
- Group-order capture: multi-cup demand gets an explicit “Pesan Rame-Rame” path; large orders require approval before payment.
- Local and AI discoverability: official branch/product information becomes crawlable, structured and consistent with GBP.
- First-party measurement: source, conversion, AOV, order status, failure, repeat and support behavior become measurable.
- Operational simplicity: outlet controls only what it needs - order status, availability and busy mode - without a full omnichannel inventory engine.

6. Business objectives and KPIs

Objective	Primary KPI	Supporting KPI	Guardrail
Increase direct demand capture	Paid web orders/day	Web order share, checkout conversion	Contribution/order must remain healthy
Reduce purchase friction	Checkout completion rate	Time-to-order, payment success	No mandatory account
Build repeatable sales	30/60-day repeat rate	Reorder rate, returning visitor conversion	Do not buy repeat with destructive discounting
Improve customer trust	Successful fulfillment rate	Support response, refund completion	Paid exceptions must have human recovery
Improve local/AI visibility	Organic local traffic + AI/search referrals	Indexed branch/product pages, GBP consistency	No spammy AEO/GEO content
Improve operations	Prep time and failure rate	Busy-mode usage, availability accuracy	Do not overload crew
Build business intelligence	Attribution completeness	AOV, basket, outlet mix, complaints	Analytics must not become accounting source of truth

7. Business scope V1

In scope	Out of scope V1
Samarinda pilot: Juanda + Slamet Riyadi	Full multi-city rollout before pilot evidence
Public website, menu, product and branch pages	Native mobile apps
Guest pickup ordering, payment, tracking	Own delivery fleet / dispatch engine
Outlet order queue, availability and busy mode	Exact omnichannel inventory engine
WhatsApp human support for exceptions	AI chatbot handling money/refunds autonomously
Group-order request/approval path	Full B2B/ERP system
SEO, local structured data, AI crawler accessibility	Mass AI-generated SEO pages
First-party commerce analytics	Full loyalty/CRM program

8. Business requirements

BR-ID	Requirement	Priority
BR-001	Website must function as official digital storefront and source of truth for Samarinda pilot information.	P0
BR-002	Customer must be able to place and pay for a pickup order without creating an account.	P0
BR-003	Paid order problems must offer one-tap human WhatsApp assistance with order context.	P0

BR-ID	Requirement	Priority
BR-004	Outlet staff must be able to operate the web-order queue with minimal training and few decisions per screen.	P0
BR-005	V1 availability must be operational (available/limited/sold out + busy mode), not an untrusted exact inventory promise.	P0
BR-006	Large/group orders must be reviewable before payment when they exceed configurable operational thresholds.	P1
BR-007	Website must be crawlable and machine-readable for search and AI discovery.	P0
BR-008	System must capture first-party order and funnel data sufficient to evaluate direct-channel economics and repeat.	P0
BR-009	Marketplace channels and walk-in ordering remain valid parallel channels.	P0
BR-010	Brand implementation must use the approved identity system and exact official assets.	P0

9. Economics, assumptions and risk

The business case is a hypothesis to be proven, not a guaranteed uplift. The website can create value through incremental orders, improved repeat, lower manual friction and a larger share of direct pickup. It can also merely cannibalize existing WhatsApp/walk-in orders. Therefore launch measurement must distinguish incremental demand, channel shift and contribution economics.

Risk	Impact	Mitigation / decision rule
Web only shifts existing orders	Low incremental revenue	Measure total orders, direct share and contribution, not web traffic alone
Outlet overload	Long waits, complaints	Busy mode, pickup capacity, soft launch and prep-time monitoring
Paid but cannot fulfill	Trust and refund burden	Human WhatsApp recovery + refund path
Staff confusion	Operational errors	Extremely simple POS UI; UAT with actual staff
Brand drift into luxury/tech aesthetic	Lower accessibility / wrong positioning	Product-first brand controls; no gratuitous 3D/WebGL
SEO/AI visibility weak	Low discovery	SSR, structured local/product data, crawlable pages, GBP consistency
Bad price/cost data	Wrong unit economics	Verify current price, HPP, fees and OPEX before financial conclusions

10. Governance and approval model

- BRD governs business intent and outcomes; PRD governs product behavior; UX spec governs interaction; Technical Design governs implementation; QA plan governs launch evidence; Decision Register governs rationale.
- Changes that materially alter business scope, payment risk, customer promise, channel role or brand positioning require explicit approval and a Decision Register update.
- Legacy BRD content may be consulted historically only if explicitly requested; it does not override this new document set.

Sources and evidence basis

Source authority is domain-specific. Business/product intent is governed by the reconciled BRD, PRD and Decision Register; UX by the UX Specification; technical implementation by Technical Design plus executable contracts/tests; visual identity by the three official brand PDFs (Asset Master Pack, Brand Identity Guidelines, Application & Rollout Kit). Internal operating data supports evidence, external official guidance supports implementation/research, and the legacy digital BRD is not normative.

Internal sources

[INT-0] Zatiaras Web V1 reconciled source-of-truth model. Business intent is governed by the current BRD/PRD/Decision Register; UX by the UX Specification; technical implementation by Technical Design plus executable contracts/tests; brand/visual identity by the three official brand PDFs listed below. Project conversation is provenance and working context, not authority over approved brand assets. The legacy digital BRD is intentionally excluded as a normative source.

[INT-1] Project planning conversation and research through 15 September 2026. Used as provenance for decisions captured in this reconciled specification set; not a substitute for approved source documents.

[INT-2A] Zatiaras Brand Asset Master Pack V1.0, 12 pages. Highest brand authority for exact assets, logo hierarchy/protection, approved variants, graphic-device assets, production rules, cup branding, vendor handoff and brand QA.

[INT-2B] Zatiaras Juice Brand Identity Guidelines V1.2 Reconciled, 12 pages. Brand authority for essence, messaging hierarchy, color system, typography, slogan system, graphic language, product imagery and digital identity behavior.

[INT-2C] Zatiaras Juice Application & Rollout Kit V1.0, 12 pages. Brand authority for touchpoint/application patterns including social, marketplaces, GBP, menu/price communication, signage, packaging, campaign templates and branch rollout.

[INT-3] POS_TRANSAKSI_SAMARINDA_2025-11-26_sd_2026-06-26.xlsx. Historical baseline only; not current September 2026 performance and does not reliably separate Juanda vs Slamet Riyadi.

[INT-4] MASTER_HPP_SEMUA_MENU_ZATIARAS_2026-06-30.xlsx and MASTER_SOP_PORSI_ZATIARAS_SEMUA_CABANG_2026-06-29.xlsx. Cost/portion context; current supplier, shrinkage and OPEX still require operational reconciliation.

[INT-5] MASTER_HARGA_MENU_ZATIARAS_3_KOTA_AS_OF_2026-06-29.xlsx. Historical price master; verify current prices before production publication.
